47m

Estimated study time

47m 28s

Instructor

Nels Henderson

Introduction

1

Leverage search intent for marketing

Understanding search intent and its relationship to search engine optimization is key to presenting your product or service as a solution to your customers' problems.

Uncover Customer Search Intent

2

Intro to search intent

Potential customers search for solutions to their problems when they pick up their phone or open Google on their browser.

3

Focus on ideal search terms

Focusing on search terms that are too generic may not be the best strategy for optimizing your website and marketing campaigns.

4

Narrowed search criteria

It's the customer who knows a little more about what they want that you want to target.

5

Identify hidden search phrases

Soon, you will see how some customer search methods may have low search volumes but are incredibly important to your business.

6

Anticipate search intent

Once you know what people are searching for and the questions they might have, you can optimize your website and your marketing campaigns to be at the right place at the right time, making you the obvious solution to their problem.

Match Search Intent to the Customer Journey

- 7 Build customer awareness**
The customer journey begins with awareness and involves being the solution that shows up at the right place at the right time.
- 8 Match content to concerns**
Your website can serve as a way for potential customers to get all their questions answered and for figuring out what those questions are through understanding search intent, which will lead to more conversions.
- 9 Increase sales in the conversion phase**
Answering the right questions, combined with your understanding of search intent and matching appropriate promotions to this part of the sales funnel, can ensure a successful sale.
- 10 Drive customer retention**
Keeping a customer returning for future purchases can be as important as their first purchase.

Conduct Keyword Research

- 11 Identify common search terms**
Paying attention to search suggestions that appear when you enter what you think is a common search term on Google can form the baseline for your keyword research.
- 12 Leverage Google Keyword Planner**
With tools from Google, you can see what people are searching for in real life to reach your website, and some findings may surprise you.
- 13 Keyword phrases with AI**
Finding new ways to align search intent with your product can help increase traffic to your site and boost sales.

Map Your Keyword Research

- 14 Analyze search volume**
Your initial prioritization and mapping will focus on search volume and how keywords and phrases align with the search curve.
- 15 Create and group keyword clusters**
As you conduct your keyword research, topics may emerge that warrant grouping, which can then inform your marketing campaigns, content, and SEO efforts.
- 16 Prioritize keyword clusters**
Finalizing your list of keywords can yield a list of questions that a diverse group of consumers might have about your product from the start of their search.

Optimize Your Marketing Efforts

- 17 **Optimize your website**
Now that you understand how people search for you, it's crucial to optimize your pages to reflect and position your product or company according to search intent.
- 18 **Integrate search intent**
Determining the questions your customers might have about your product can form the foundation of a content marketing campaign that enhances your SEO.
- 19 **Match keyword clusters to Google Ads**
Having improved your SEO, there's no reason not to use this work to enhance your Google Ads or other display advertising campaigns.
- 20 **Leverage social media**
Recent studies show that people often initiate their searches on social media apps.

Conclusion

- 21 **Next steps**
